O paisagismo foi concebido em diálogo com os caminhos preexistentes da área de vegetação adensada adjacente ao terreno, que apresentam traçado curvilíneo e orgânico. Essa característica orientou o desenho dos novos percursos, buscando integrar o projeto ao contexto natural e, ao mesmo tempo, estabelecer contraste com a implantação ortogonal das edificações.

Na composição vegetal, priorizou-se o uso de espécies nativas do Cerrado, complementadas por espécies adaptadas ao clima local. A paleta cromática foi definida a partir de tonalidades de amarelo, roxo, rosa, branco e vermelho, estabelecendo relações harmônicas entre si e com as cores presentes na arquitetura.

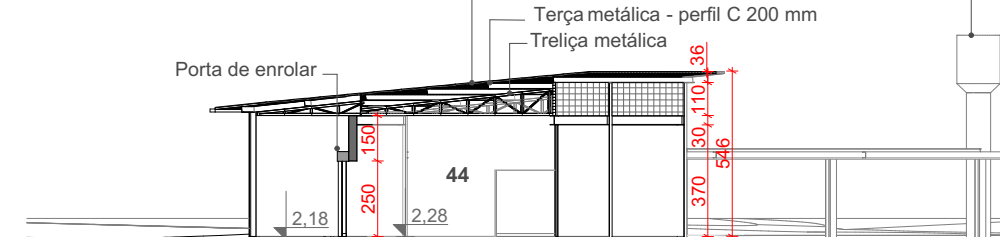

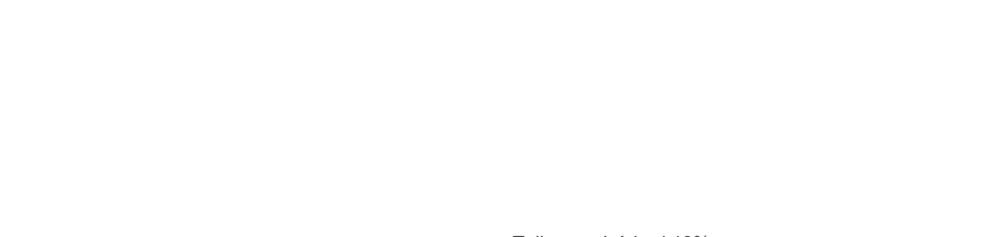

O projeto também utiliza diferentes tipos de piso — intertravado e concreto drenante em tonalidades distintas — com o objetivo de criar variações no desenho do solo e auxiliar na delimitação de áreas de uso.

Além disso, o paisagismo incorpora espaços de permanência e mobiliário urbano, como um deck multifuncional voltado ao descanso, contemplação e observação das atividades esportivas, bem como elementos de assento associados aos campos, que integram áreas de convivência e vegetação.
